

RT/duroid® 6202PR High Frequency Laminates

Features:

- Low loss for excellent high frequency performance.
- Tight ϵ_r and thickness control.
- Excellent electrical and mechanical properties.
- Extremely low thermal coefficient of dielectric constant.
- In-plane expansion coefficient matched to copper.
- Very low etch shrinkage.

Some Typical Applications:

- Phase Array Antennas
- Ground Based and Airborne Radar Systems
- Global Positioning System Antennas
- Power Backplanes
- High Reliability Complex Multilayer Circuits
- Commercial Airline Collision Avoidance Systems
- Beam Forming Networks

RT/duroid® 6202PR high frequency circuit material is a low loss and low dielectric constant laminate offering superior electrical and mechanical properties essential in designing complex microwave structures which are mechanically reliable and electrically stable and used for planar resistor applications.

Excellent dimensional stability (0.05 to 0.07 mils/inch) is achieved by the addition of limited woven glass reinforcement. This enables the manufacture of tight toleranced planar resistors.

¼ oz. to 2 oz./ft.² electrodeposited copper foil, ½ oz. and 1 oz. rolled copper foil and ½ oz. and 1 oz. electrodeposited copper foil with a resistive layer, may be specified as cladding on dielectric thicknesses from 0.005" to 0.030" (0.127 to 0.762 mm).

Applications particularly suited to the unique properties of RT/duroid 6202PR material include flat and non-planar structures such as antennas and complex multilayer circuits with interlayer connections.
